SUMMARY

3rd year BS Information Technology student at Bulacan State University, majoring in Web and Mobile Application Development, with a primary focus on web development. Built and shipped real projects — from backend work on a group student enrollment system (PHP/MySQL) to a solo frontend e-commerce storefront (React + TypeScript) — all live and on GitHub. Driven by problem-solving and a genuine curiosity about how things work. Open to freelance and internship opportunities in web/mobile development.

PROJECT EXPERIENCE

Backend Developer, Group Project

2025

Alab eBulSU Enrollment System — Bulacan State University | PHP, MySQL

- Developed backend logic and database schema for a student enrollment system, enabling staff to manage student records and enrollment status in one workflow.
- Built the enrollment workflow end-to-end, reducing manual processing steps for enrollment status updates.
- Collaborated with a team to deliver a fully working system, deployed live at alab-ebulsu.free.nf and published on GitHub.

Solo Frontend Developer

2026

ShopNest — Personal Project | React 19, TypeScript, Vite, React Router, Vitest

- Built a frontend e-commerce storefront demo from scratch, implementing product browsing, filtering, cart, wishlist, and a multi-step checkout flow.
- Structured the codebase with React Router and TypeScript for maintainability, keeping components testable and reusable.
- Tested key components with Vitest and React Testing Library, catching UI regressions before deployment.
- Deployed live at shop-nest-ten-rho.vercel.app; source published on GitHub.
